

Attention,

Owners of computers with one megabyte (1MB) or less of RAM.

If your system is running **DOS 5.0** *and has a 386 microprocessor* and **no memory above one (1) megabyte** PLEASE NOTE THE FOLLOWING:

The Theatre of War installation program will install Theatre of War to attempt to run in Super VGA mode. Theatre of War CANNOT run in Super VGA with less than 2MB. If you attempt to run Theatre of War under these conditions, it will probably fail.

To run Theatre of War successfully in **standard VGA** please do the following:

Using a text editor (DOS 5.0 comes with EDIT), open the "twar.bat" file (it should be contained in the TWAR directory). It consists of one line. Modify only the "H" and "V" parameters to read "H1 V0". Should you upgrade your machine at a later date with greater memory, run config.exe to re configure Theatre of War to run in Super VGA mode.

Should you have any questions, please call our customer support group at (409) 776-2187 between the hours of 9:00 am and 6:00 pm central time.

Thank you for choosing Theatre of War and Three-Sixty!
